Amendments to the Specification

Please amend the paragraph beginning on page 1, line 10 as follows:

This invention -- a PDF exclusive invention -- structurally and methodologically relates to the speedy, efficient and high-quality handling of an image-only file in a PDF data stream which is en route to a printer. Such a file might typically have been initiated by a document scanning operation aimed at sending that document to a recipient printer via e-mail and the Internet. Other transit modalities are, of course, possible, and the present invention is independent of all such modalities.

Please amend the paragraph beginning on page 2, line 20 as follows:

Turning now to the drawings, and referring first of all to Fig. 1, illustrated generally at 10 are both the PDF exclusive system and ~~the~~ methodology of the present invention. Describing the invention now in a blend of systemic and methodologic ways, block 12 in Fig. 1 represents a PDF Data Stream with respect to which system 10 is to perform. With the understanding that data stream 12 may contain one or plural PDF image-only files, such as the two shown at 12a, 12b, as well as other-composition PDF files, such as those shown at 12c, 12d and 12e, a Yes/No inquiry block 14 in the system queries this data stream for the purpose exclusively of determining whether the block has "engaged" a PDF image-only file.
